

INDUS

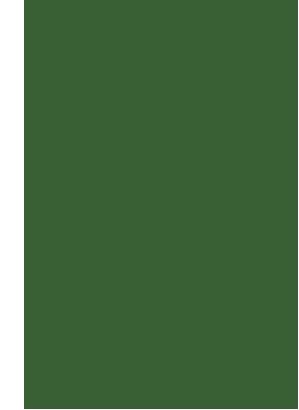

Individual Unit Tracking System

Supported by
Algorand

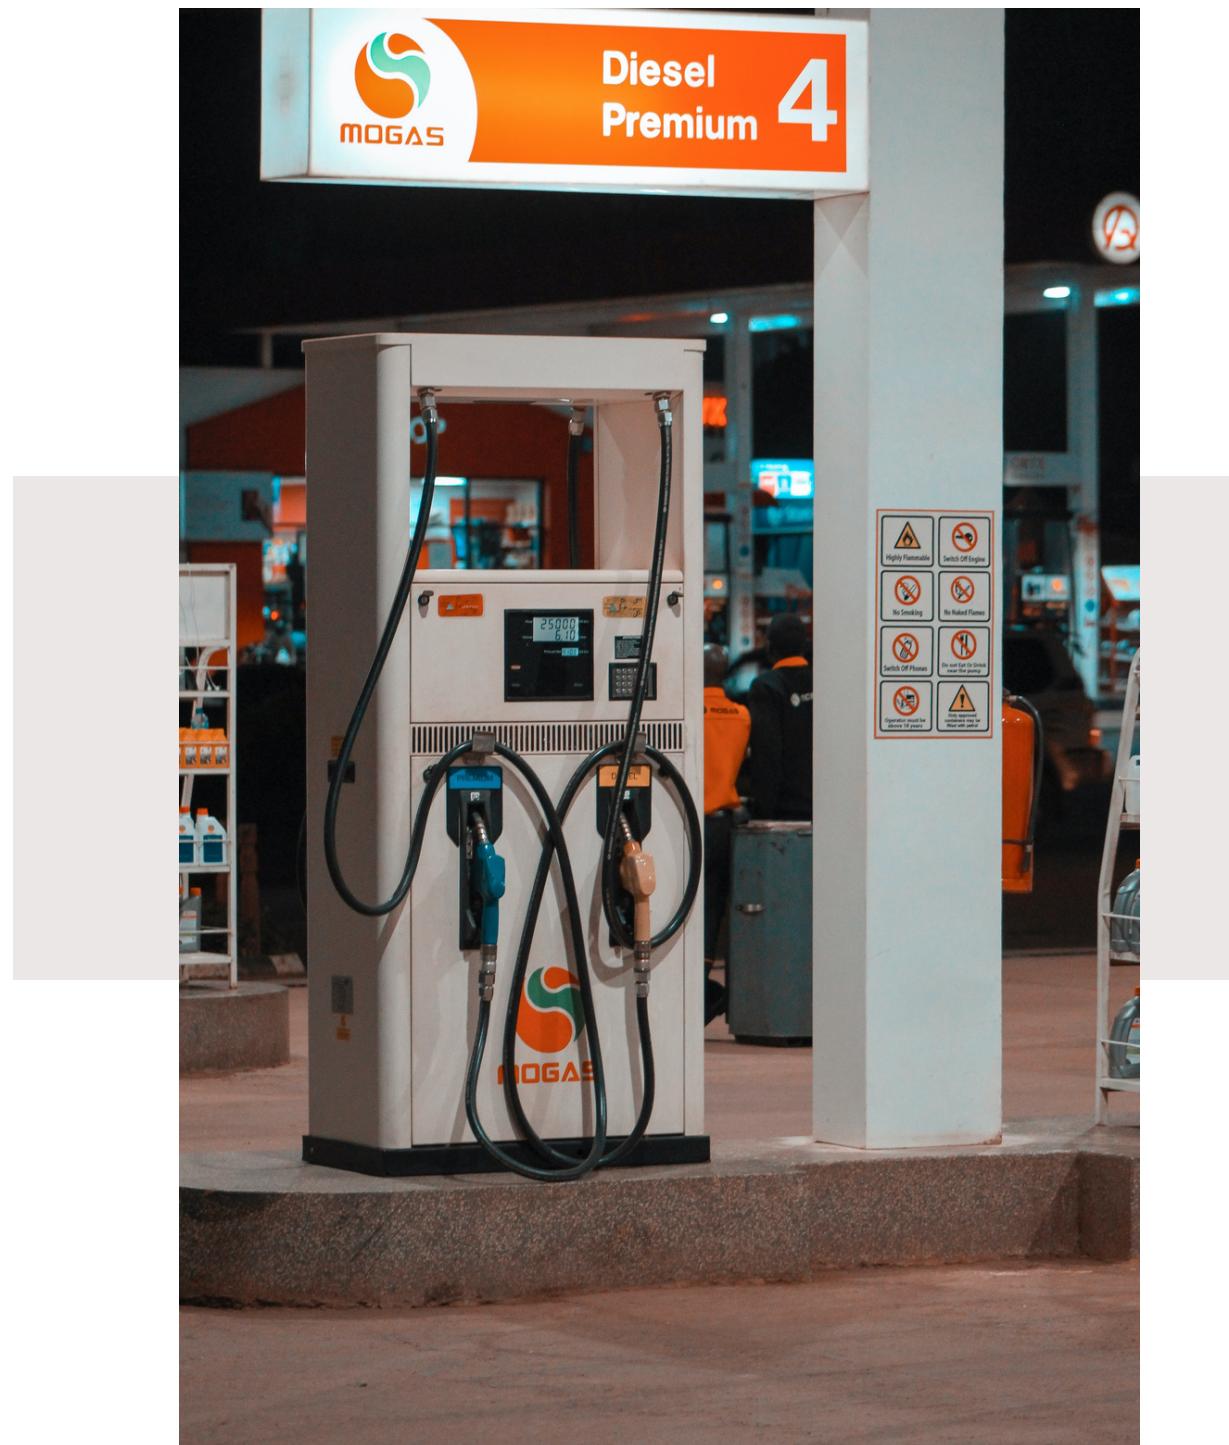

Introduction

It's no secret that your credit score can have a major impact on your life. A bad credit score can make it difficult to get a loan, rent an apartment, or even get a job.

The real score we should worry about

How often have you been asked to show your electricity bill, petrol consumption, water consumption etc. before you bought a house?

Carbon debt is the real debt.

01. Problem

Everyone talks about lowering carbon footprint but most of it goes untracked and is not incentivised.

02. The New Reality

We see ourselves getting into a reality where people will be cautious and aware of their carbon footprint and take active actions towards lowering them

03. Reward

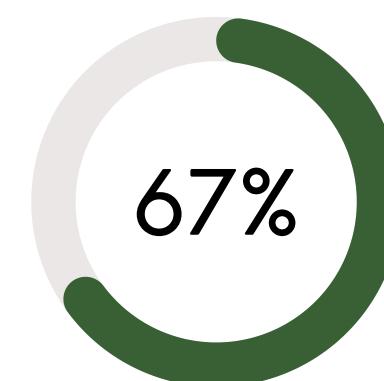

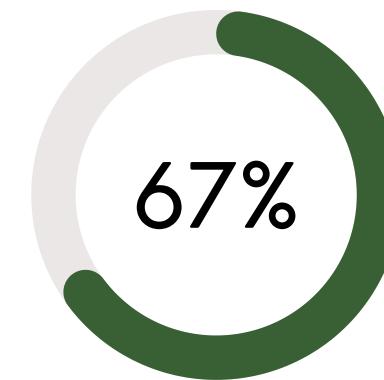

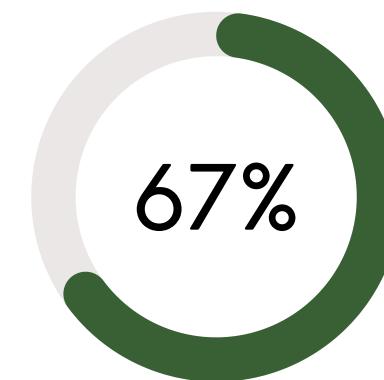

And we want to reward them. With better opportunities, and societal appreciation for being responsible citizens.

Our Idea

We just want all our energy bills to be transparent and accessible to society.

Why? Here's why...

Transparency

We take so much pride in having a good credit score. But what's your INDUS score?

INDUS

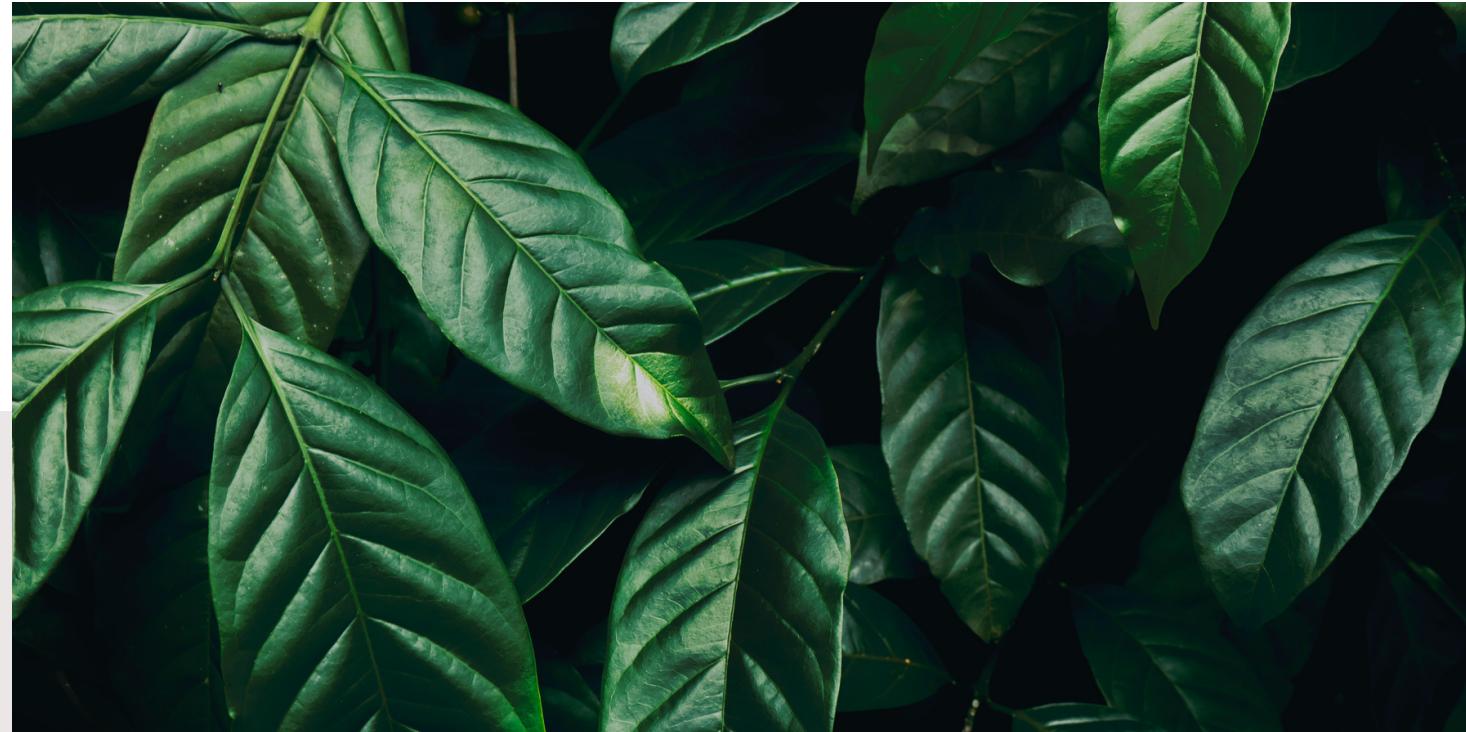

INDUS is a system which will closely monitor all your non-renewable energy units. Petrol, Electricity, Water etc.

Be a climate champion

Compete with your neighbors, be the winning town, city, company by earning more INDUS tokens

How it works

Governtment departments add an individual's monthly consumption readings to our dApps which takes care of calculating a score for every individual based on his energy consumption. A leader board helps you keep a track of your friends progress and get some extra perks.
